The new structure relates to the level of the UN garden preserving as much as possible the work of the organisation. This area will have no security requirements.

The Principles

Cafeteria
Visitor area/Exhibition space
Program

In addition a ramp and staircase connected the different levels. Another important factor was to preserve a clear view path from 47st street to the plaza between the two structures. Another important factor was to preserve a clear view path from 47st street to the plaza between the two structures. Another important factor was to preserve a clear view path from 47st street to the plaza between the two structures.

The North and South facade in the 47st street axis are curtain walls that will keep the slates non-load bearing, this is to keep also be states that are combined. The wall is designed with prefab positions completely random). The idea for the green wall is that there will be no threat and it can be opened up and the compound.

The new structure on the North Lawn. Their proposal more or less followed the main principles.

Third to work with the Manhattan Waterfront Plan in a public space and direct connection to the East River. Second to create and preserve a plaza...
